OVERVIEW

A 3rd year Computer Science student at Cebu Institute of Technology with hands-on experience in software development through academic projects spanning mobile, web, and systems programming. Seeking an OJT opportunity where I can apply my technical skills in a professional environment, contribute meaningfully to a team, and gain real-world industry experience.

EDUCATION

- Cebu Institute of Technology** Cebu City, Philippines
Bachelor of Science in Computer Science *Aug 2023 – Present*
 - Academic Achiever (A.Y. 2023 – 2024)
 - Academic Achiever (A.Y. 2024 – 2025)
 - **Relevant coursework:** Data Structures, Web Development, Mobile Development, Database Management, Software Engineering, Object-Oriented Programming, Data Analytics, UI/UX Design
- Ocaña National High School** Carcar City, Philippines
STEM *Jun 2021 – Mar 2023*
 - Graduated with Honors

CERTIFICATIONS

CodeChum C Programming Certification	<i>May 31, 2024</i>
CITU – Java Object-Oriented Programming Certification Exam	<i>May 3, 2025</i>
Sololearn Introduction to Python Course Certificate	<i>2025</i>
Canva Design School Certificate	<i>2024</i>

PROJECTS

- LEXOR – A Programming Language Interpreter:** A four-phase interpreter for the LEXOR programming language built in Java using Maven, implementing Lexical Analysis, Syntax Parsing, Semantic Analysis, and an Execution Engine. Features a strongly-typed symbol table, recursive descent parser, and a custom exception system with phase-aware error reporting.
- Ra-Byes! – Rabies Awareness Infographic Website:** A public health infographic website built with Node.js and TypeScript, designed to educate users on rabies awareness, prevention, and wound treatment. Features a statistics-driven home page, informational sections on rabies risks and first-aid procedures, and a step-by-step WikiHow-style treatment guide. Integrated a geolocation-based service using MapLibre to help users locate the nearest rabies treatment center or hospital in real time.
- AsaNaBus – A Bus Tracking Application:** A database management project that aimed to make bus commuting easier and smarter, improving efficiency in trip management. Implemented user authentication and account management, including login validation and user data handling.
- FourLink – A Mobile Connect 4 Game:** A two-player mobile game with turn-based gameplay on a single device. Engineered game mechanics such as turn handling, collision logic, and victory condition algorithms.
- Aegis Chess – Chess Game:** A fully functional chess game implementing all standard rules and moves for two players on a single device. Developed algorithms for move validation, game state tracking, and endgame condition detection.

SKILLS

Languages: C, C++, C#, Java, Kotlin, Python, Perl, HTML, CSS, JavaScript
Frameworks: React.js, Node.js, Django, Spring Boot, Tailwind
Databases: PostgreSQL, MongoDB, Supabase
Tools & AI: MySQL, Figma, Git/GitHub, OpenAI API, Claude API
Core Concepts: CRUD, Object-Oriented Programming, Data Structures, Algorithms, Application Programming Interface
